

AXESS Ready

Protects and provides control, for basic IP needs.

- Offers a collection of additional products that provide IP control and SurgeX patented surge technology.
- Gives users remote access IP control capabilities, including on/off, scheduling, AutoPing, and power cycling.
- Provides an intuitive user interface that provides access to the outlet and enables system administrators to change configuration parameters.
- Creates schedules with single or multiple conditions to conserve energy by powering down equipment when not in use.
- Enables remote reboot of any device that is connected to any Axess Ready product.
- Features SurgeX Advanced Series Mode surge elimination technology that eliminates surge energy up to 6,000 volts, and protects equipment from AC surges and electrical transients, without producing harmful side effects such as ground contamination or common-mode disturbances.
- Enables limited Cervella integration

TECHNOLOGY GUIDE

Advanced Series Mode®	Patented surge protection technology that eliminates surge energy and without producing ground-wire contamination or common-mode disturbances
CouVs®	Catastrophic Over-Under Voltage Shutdown – Protects equipment from harmful spikes or dips in voltage
ICE®	Inrush Current Elimination Filter – Resolves inrush current problems for high ampacity multi-component systems
Impedance Tolerant®	EMI/RFI Filter

Control and protect the health and efficiency of your sophisticated integrated systems, anywhere, at any time.

AXESS ELITE

CERVELLA

AXESS

AXESS Ready

Web Enabled Product Line

Introducing the new SurgeX Web Enabled Product Line.

Featuring four intelligent IP-addressable enterprise solutions, engineered to protect, manage, monitor, report, and secure the reliability of any integrated system.

protect +

report +

manage +

monitor +

secure +

AXESS ELITE

The most advanced energy management, monitoring, and protection system available.

- Provides premium protection, comprehensive energy management, and two-way communication with all IP-enabled products on the network
- Controls power on an outlet level, turns outlets on and off, and allows integrators to control expansion units from the master unit
- Displays power and energy usage per outlet and offers an advanced overview of the system's energy consumption by each connected device
- Collects and internally logs temperature, voltage measurements, and current draw measurements and reports back via a user-friendly energy and power usage display
- Schedules triggers by outlet, contact closure, or input and output
- Features SurgeX Advanced Series Mode surge elimination technology that eliminates surge energy up to 6,000 volts, and protects equipment from AC surges and electrical transients, without producing harmful side effects such as ground contamination or common-mode disturbances
- Includes comprehensive protection, including common and normal mode Impedance Tolerant EMI/RFI filtering, SurgeX ICE Inrush Current Elimination, and COUVS Catastrophic Over/Under Voltage Shutdown
- Enables full Cervella integration

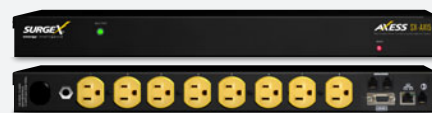

SX-AxisE / SX-Ax20E

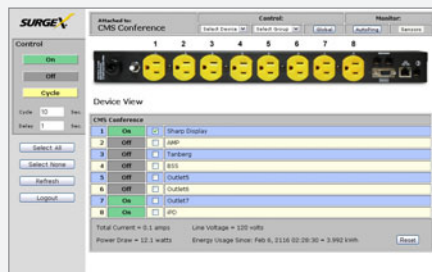

AXESS

Simplified and sophisticated power management.

- Enables you to protect, monitor, and control your power distribution platform online, 24/7
- Customizes, synthesizes, and monitors individual outlets and power settings on integrated IP-enabled devices via remote access
- Monitors and controls individual outlets, and power usage at a box level
- Creates and runs custom sequences across an entire network and automates e-mail notifications of any power phenomenon, based on user-defined conditions
- Displays real-time values of voltage, total system current draw, total system power draw, as well as the total system energy usage
- Features SurgeX Advanced Series Mode surge elimination technology that eliminates surge energy up to 6,000 volts, and protects equipment from AC surges and electrical transients, without producing harmful side effects such as ground contamination or common-mode disturbances
- Includes comprehensive protection, including common and normal mode Impedance Tolerant EMI/RFI filtering, SurgeX ICE Inrush Current Elimination, and COUVS Catastrophic Over/Under Voltage Shutdown
- Enables limited Cervella integration

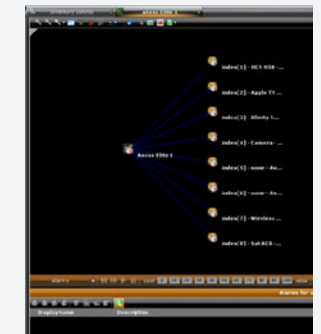

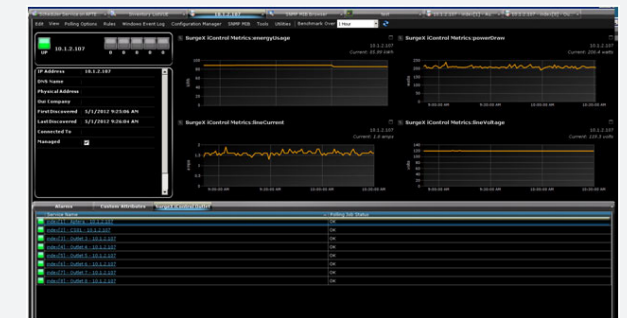

SX-Axis / SX-Ax20

CERVELLA

The ultimate enterprise-level platform solution to effectively manage an entire system.

- Provides a centralized dashboard to effectively manage, monitor, and diagnose every product connected to your client's network
- Features an intuitive, point and click dashboard that provides a building schematic and floor plan view of any device on the network, right down to the office location
- Utilizes enterprise-grade servers to deliver advanced reporting to system managers, and includes comprehensive reporting of the system's power, energy, overall network health, and user-defined history logs for up to 13 months
- Includes proprietary Secure Access Management (SAM) software to ensure complete system security, and provides instant admin user control that allows system managers to manage who gains access to the network, at any time
- Gives system managers single username/password access, eliminating the need to manage multiple IP addresses or individual device usernames and passwords
- Delivers automated e-mail/text notifications to system administrators to ensure you are the first to know if there is a problem with the system before your clients do
- Aggregates outlet-level energy and power information collected from each SurgeX Axess Elite on the system in a single interface
- Discovers all SurgeX Axess products on the network automatically

Cervella Single

SX-CVS

- Single username and password
- 1U half rack depth
- 120GB memory storage
- RAID 1 Drive Array
- Windows 7 (Hardened)

Cervella Multi

SX-CVM

- Multiple usernames and passwords
- Enterprise Grade Hardware
- Dual 500GB Hot Swappable Drives
- Windows Server
- 1U Rack Mount
