

D-RLC10, DB-RLC10, DS-RLC10

Remote Level Control - Rotary Optical Encoder

The **D SERIES-RLC10** is a rotary remote level control that provides user adjustment at single or multiple locations. Optical encoder technology allows continuous knob rotation with a comfortable adjustment rate and long-term trouble-free and noise-free operation. These controls directly connect to any RDL VCA and OEM equipment with 0 to 10 Vdc ramp inputs.

DESCRIPTION

A single RLC10 may be connected to a ramp-controlled VCA using a single-pair shielded audio cable or unshielded cable. A rear-panel switch configures the control as the MASTER. The MASTER mode causes this control to drive the 0 to 10 Vdc ramp output and to monitor its pulse terminals in case any other RLC10 controls are connected.

As many as **nine additional** RLC10 controls may be wired in parallel with the MASTER control using UTP cable (CAT5, CAT6 or equivalent). The rear-panel MODE switch on each additional remote control is set to SLAVE mode. Multiple -RLC10 controls set to the SLAVE MODE may be connected to an RDL RU-VCA2A or RU-VCA6A, utilizing the VCA as the ramp generator. This connection is also possible with OEM equipment accepting open-collector pulses that are compatible with the RLC10 output pulse rate and width.

Operation is the same for a single control, or for each control connected in a multiple control point installation. The 0 to 10 Vdc ramp voltage is incremented up or down when the front-panel knob is rotated. Acceleration is provided so the rate of change is faster when the knob is rotated more rapidly, yielding a responsive feel and rapid elimination of acoustic feedback. The LED ring display encircling the control knob operates as a virtual pointer. When an RLC10 is not being adjusted, its display switches to a dim intensity to avoid being a visual distraction. The display returns to a bright intensity during adjustment. Upon power-up, the output will return to the last operating level.

SPECIFICATIONS

Ramp:

0 to 10 Vdc (Slave mode input; Master mode output)

Pulse outputs (2):

Open-Collector @ 20 mA (UP, DOWN)

Pulse duration:

500 uS (min.) to 4 mS (max.)

Pulse interval:

500 uS (min., between consecutive pulses)

Rotations, approximate min-to-max:

5 (slow rotation, no acceleration)

3 (medium rotation, with acceleration)

1 (fast rotation counterclockwise)

Level control:

Optical rotary encoder

Power requirement:

24 Vdc @ 50 mA, Ground-referenced

Mounting:

Mounts in standard US electrical box, RDL WB- or SMB-series boxes; cover plate available separately

Dimensions:

Height: 4.11 in. 10.44 cm; Width: 1.31 in. 3.33 cm; Depth: 0.98 in. 2.49 cm (w/o knob); Depth: 0.545 in. 3.93 cm (overall)

FEATURES

- Rotary Optical Encoder Remote Level Control
- Single or Multiple Control Locations
- Up To Ten Remote Control Locations
- Integral 0 to 10 Vdc Ramp Generator
- Visual Level Display of Operating Level
- Display is Bright During Adjustment
- Display Dims After Adjustment
- Powers Up to Last Level Used
- Compatible with All RDL VCA Modules
- Available in Stainless Steel, Black and White

CUSTOMIZABLE

The text on the front of this product may be customized using the customization tool at rdlnet.com.

This product may share a common power supply with other RDL products. System energy efficiency is increased by powering multiple products from a single power supply.

APPLICATION DIAGRAM

* Each D-RLC10 may be set as Master or Slave on rear-panel switch; Master unit generates the 0 to 10 Vdc ramp.
