

109AT70 AT SERIES

SMALL LANDSCAPE SYSTEM, 70V DISTRIBUTION, (8) 3" SATS, (1) 10" SUBWOOFER, (1) GXD8 AMP - UP TO 1400 SQ. FT

- Satellites (8) 32AT70
- Subwoofer (1) 101ST70-X
- Amplifier (1) GXD8
- Stakes (8) AT.STAKE.AL12
- Freq Response 24Hz-20kHz±3dB
- Impedance 70V Transformer
- Sensitivity 88dB 2.83V /1m
- Finishes Sats - Black Wrinkle, Bronze Wrinkle, Verde, Weathered Iron, Premium Finishes and Plating Available

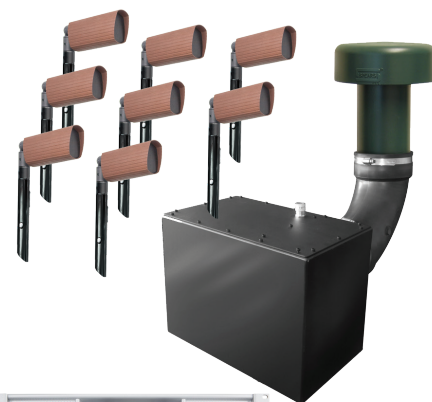

Our mid-tier landscape system continues to incorporate upper end All-Terrain satellite speakers but was packaged with a budget in mind. It provides generous coverage for small to medium areas while also providing each of those areas with uncompromising audio performance and minimal visual impact. The incorporated DSP processor allows greater flexibility in balancing the satellites and subwoofers in an outdoor audio system. We carefully measure and program each of these systems before they ever leave our facility, taking the guess work out of your installation.

Our new 32AT70 landscape speakers now feature a coaxially mounted 0.75" aluminum dome tweeter design over a proprietary high-excursion 3" woofer, with a built in crossover network and 30W/70V low distortion transformers. These outdoor speakers will play at higher volumes while still maintaining a smooth frequency response of 100-20kHz.

The 101ST70 features a proprietary high excursion 10" aluminum driver mounted within an aluminum sealed band-pass enclosure.

Engineered for direct burial placement, the compression design creates unrivaled low end frequency response, and nearly complete invisibility. You can install up to (8) of these subwoofers on a single run of speaker wire when paired with our M1000 DSP amplifier.

See individual datasheets for speaker details and color options.
