

B-G2-FP

2-Gang Designer Faceplates for CNX-B Keypads

Using Designer faceplates, the CNX-B series of keypads can be customized to match any décor. Designer faceplate options include a variety of metallic and plastic finishes including a primed metal surface option to accommodate paint or wallpaper.

The B-G2-FP (A,B, or W) is a 2-gang plastic faceplate that enables the installation of two CNX-B keypads side-by-side in a 2-gang electrical box. As a further enhancement, a metallic faceplate cover can be installed over the plastic faceplate for a truly elegant appearance.

Single-gang and triple-gang models are also offered.
