

Architectural Series Faceplates: B-G1-FPAR

Description

Architectural Series Faceplates bring a clean, updated look to the CNX-B series keypads. They feature machined aluminum construction with a stylish shape that is a pleasing alternative to traditional flat faceplates, and they are available in a variety of finishes including stainless steel, anodized black, polished brass, and the standard white and almond. (Refer to the table below.)

Use the following procedure to install the faceplates on single-gang keypads. (Refer to the illustration below.)

NOTE: Since the divider and the removable buttons are loose and can fall off when removing the faceplate, record the button arrangement so they can be repositioned properly when installing the new faceplate.

1. To replace an existing faceplate, use a small screwdriver inserted in the notch at the bottom of the faceplate to unsnap it from the keypad.
2. Attach buttons with LED window oriented upward to match each LED indicator.
3. Attach divider and faceplate (orient with notch at bottom). Make sure faceplate snaps in position.
