# How to Use Revolabs Wireless Microphones

## Muting Revolabs Wireless Microphones

Revolabs HD Wearable Microphones turn on and mute automatically when removed from the Charger Base. This reduces noise while being placed into position. The LED will cycle through all of the colors upon initiation and then flash RED to indicate muted status. Un-mute the microphone by pressing and releasing the Mute button (flashing GREEN: un-muted).

## Pairing Wireless Microphones to Base Station

Pairing creates a link between the HD Wireless Microphone and the Base Station, with a unique electronic serial number. When the microphone and Base Station have been previously paired, the mic will automatically try to connect to the same Base Station whenever it is lifted from the Charger Base.

1. Turn the microphone OFF (no LED activity). If the microphone is ON, press and hold the Mute button for 10 seconds until the LED turns solid RED then release the button to turn the unit off.
2. Put the Base Station into pairing mode by pressing and holding the button for the desired channel on the Base Station for seven seconds until the LED turns solid RED, then release.
3. Within 30 seconds, push and hold the Mute button on the microphone for seven seconds. The LED will turn solid RED. Release the Mute button. Once pairing is complete, both LEDs will flash GREEN, then switch to flashing RED (muted).
