

Next-generation TSW touch screens

The new TSW-560, TSW-760 and TSW-1060 deliver unprecedented touch screen performance in residential homes. We kept everything that you love about TSWs the same and made strategic improvements that deliver big benefits for you and your customers.

New touch screen features include:

Blazing fast processor

The latest TSWs feature our new state-of-the-art processor that delivers a whole new level of performance. Touch screen control and navigation is incredibly fast and responsive, perfect for custom home automation.

Native Sonos integration

Only new Crestron TSWs are able to run the full Sonos application and interface right on the touch screen as part of a perfectly integrated whole home audio system. And this is just the start – the new generation of TSW touch screens is designed to deliver even more incredible applications for the luxury home market.

Optional camera and microphone

To support high quality video intercom experiences between residents in different rooms and buildings, models are available with built-in cameras and microphones.

Backlit capacitive buttons

The screen border now features backlit capacitive buttons that illuminate according to user needs. The result is an even sleeker look and more intuitive user navigation.

Ambient light sensor

Like popular mobile devices, screen brightness and LED backlights now adjust automatically according to ambient light levels in the room.

Secure mounting option

All TSWs now ship with a special mounting latch that makes it easy to lock touch screens in place.

Even better performance with no surprises

In upgrading such an important and popular product line we took special care not to make any changes that disrupt how you install and commission TSWs. The sleek styling and colors remain the same, as does power via PoE and easy mounting options.
