### Leyard and Planar Displays Deepen Impact of Tedx Portland Conference

TEDx is a program of local, self-organized events that bring people together to share a TED-like experience. TEDxPortland is an independently organized TED event. In its ninth consecutive year, it has a rich history of spreading ideas, sharing knowledge and building community in Portland.

The 2019 TEDx Portland conference held at Keller Auditorium implemented a staging solution featuring three Leyard® CarbonLight™ LED Displays. The center video wall was a 34.5-foot-by-16-foot Leyard CarbonLight CLM Series display in a 21x5 configuration with a 10.4mm pixel pitch (CLM10.4). The two flanking LED video walls were both 8-foot-by-15-foot Leyard CarbonLight CLI Series displays in a 5x9 configuration with a 2.6mm pixel pitch (CLI2.6). Additionally, half a dozen Planar large format LCD displays were used throughout the event serving as lobby signage and confidence monitors for the speakers.

Leyard CarbonLight LED Displays are designed specifically for rental, staging and fixed-flexible installations. With a broad range of models, Leyard CarbonLight LED displays deliver a wide range of unique LED display solutions for eye-catching, creative public venue installations. Leyard's large format displays are designed for demanding applications with high durability and performance requirements. From communicating information to enhancing ambience, Leyard's flat panel display monitor lines are the ideal complement to any retail store, lobby, control room, or other professional application.
